

Arid 3

Turf-Type Tall Fescue

SPECIAL FEATURES

Arid 3 is one of the best turf-type improved tall fescue varieties, providing superior density and a rich, attractive appearance. It has created an immense demand for seed in the market place. Arid 3 has many features to make it successful including its dark green color, excellent rate of establishment, wide area of adaptation, exceptional turf quality and excellent disease and insect resistance.

AGRONOMIC CHARACTERISTICS

SUPERIOR TURF QUALITY: Arid 3 places in the top 5% overall quality ratings in Official National Turfgrass Evaluation Program (NTEP). It shows exceptional versatility. It has excellent heat, drought and disease tolerance and insect pressure. Its deep, rich color provides an attractive appearance, even under high stress conditions. Arid 3 has good cool weather color retention and early spring color. It performs well in full sun or

moderate shade. Arid 3 has excellent rate of establishment and excellent summer density ratings. It also has excellent percent living ground cover.

DISEASE TOLERANCE: Arid 3 rates first in net blotch resistance and brown patch; and at the top in resistance to pink snow mold and stem rust.

MODERATE NITROGEN LEVEL REQUIREMENT: Arid 3 has its highest rankings in NTEP under a moderate nitrogen level which means it maintains good color even at reduced levels of fertilizer, saving you money. It also rank in the top10 for quality under a low cut and medium cut. It rank in the top 5 for quality when irrigated to prevent stress and when irrigated to prevent dormancy.

ENDOPHYTE ENHANCEMENT: Arid 3 is one of the world's best tall fescue varieties with endophyte. Endophyte is a natural biological system for insect control.

AREA OF USE: Arid 3 is recommended for use on home lawns, parks, athletic fields, roadsides, institutional grounds, golf course roughs and out-of-play areas, school play areas and overall greening of cities. Arid 3 also performs extremely well when used in blends and mixtures with other top performing Jacklin Seed Kentucky bluegrass in ratios from 90 to 70% of tall fescue by weight. It requires moderate or low levels of maintenance.

SUGGESTED SEEDING RATES

6-12 lbs. per 1,000 sq. ft. (260-520 lbs. per acre)
