

# JAGUAR 4G

## TURF-TYPE TALL FESCUE

### ATTRIBUTES

☆'s 5 = Outstanding, 4 = Very Good, 3 = Good, 2 = Moderate, 1 = Poor

★★★★★	Leaf Texture	★★★★★	Brown Patch Resistance
★★★★★	Dark Green Color	★★★★★	Pythium Blight Resistance
★★★★★	Reduced Topgrowth	★★★★★	Easier Mowing

The Jaguar tradition started early on as a name synonymous with excellent turf quality and dependability, and continued with Jaguar II and Jaguar 3. Jaguar 3 has been a staple of quality turf for many years because of its ability to withstand heat, drought, and poor soils and its excellent resistance to brown patch and *fusarium* patch packaged in one tall fescue. **Jaguar 4G** lives up to the Jaguar tradition, surpassing Jaguar 3 with its superior quality, fine leaf texture, dark color and improved brown patch resistance.

### PERFORMANCE HIGHLIGHTS

**DISEASE AND PEST RESISTANCE:** **Jaguar 4G** has improved resistance to two of the more costly diseases to control: brown patch and pythium blight.

**WIDE ADAPTATION:** **Jaguar 4G** is adapted to use in temperate and transition regions under different management regimes- high, medium and low input. It will perform best at 1½" to 3" (37.5 to 75 mm) height cuts.

**SUN AND SHADE ADAPTATION:** **Jaguar 4G** is adapted to full sun and partial shade. Under partial shade, **Jaguar 4G** will retain its density and ground cover when perennial ryegrasses and most Kentucky bluegrasses will succumb and thin out.

**DROUGHT TOLERANCE:** **Jaguar 4G** has a good rooting depth enabling it to extract moisture from deeper in the soil profile and

enabling it to remain green for extended periods when other species have gone dormant.

**SOD FARM TESTED:** **Jaguar 4G** has been tested on sod farms in Maryland, Ohio, California and Virginia and displayed good quality, dark color, and reduced top growth.

**BLENDS WELL:** **Jaguar 4G** is a good choice when used alone or matched with other Jacklin grasses in mixtures and blends for permanent turf in temperate and transition zone climates. Plant at 6-12 lb. per 1000 sq. ft. (30-60 g/m<sup>2</sup>) for blends and straights. For mixtures it can be seeded at 90-95% **Jaguar 4G**/5-10% Kentucky bluegrass to improve sod strength without netting. **Jaguar 4G** is adapted to use on home lawns, parks, and industrial and school sites, golf course roughs, and sports fields.
